

Noggin2 Cheatsheet

Noggin2 cheatsheet

Quick daily reference. Full explanation in `README.md`.

The idea

Write freely in today's note. Drop tags mid-sentence. The assistant catches up: answers, compiles, carries forward. You never stop to file.

Daily notes

- Today = `YYYY-MM-DD.md`. Append all day.
- Tomorrow the assistant copies it to `YYYY-MM-DD theme.md` and works in the copy. Delete the bare original once you have glanced at the twin.
- Append-only. Corrections are dated footnotes, never edits.

1. Inline tags (acted on automatically)

tag	what happens
<code>#claude</code>	answers your question as a footnote <code>[^c-N]</code> , your line untouched
<code>#todo</code>	added to the rolling checklist (stable-hash checkboxes survive rebuilds)
<code>#tobuy</code>	added to the wishlist
<code>#reminder</code>	resurfaced later in <code>## recall</code> , rotated by relevance

2. Compiled intake (just filed)

`#dailymusic` `#dailyfilm` `#dailyquote` `#dailyart` `#dailymeme` `#dailygame` -> each line to `_compiled/<name>.md`. Add your own daily-* tag anytime. `#inspo` -> inspiration you grabbed, to `_compiled/inspiration.md`. `#seed` -> an idea that is yours, to `<Topic>/seeds.md`. (grabbed = inspo, made = seed.)

3. `#run <verb>` (on-demand, occasional)

command	does
<code>#run deepdive <topic></code>	structured research note
<code>#run rabbithole <topic></code>	verbose exploration note in <code>_rabbitholes/</code>
<code>#run link [note]</code>	bidirectional linking pass
<code>#run title <url></code>	wrap a bare URL as <code>[Title](url)</code>
<code>#run promote <what> -> <Folder></code>	move daily content into a topic folder
<code>#run project <idea></code>	scaffold <code>_projects/<slug>/brief.md</code>
<code>#run review <thing></code>	critique a note/plan/draft: gaps, errors, weak spots
<code>#run digest</code>	build this week's digest
<code>#run rebuild <cache></code>	regenerate a compiled file

Bare `#deepdive` / `#rabbithole` = quiet "maybe later" markers. `#run deepdive <topic>` = do it now.

Tags it never touches (your search markers)

`#followup` and all domain tags (`#music`, `#hardware`, ...).

Sections the assistant writes

- `## claudespeaks` - one daily thought from your recent activity.
- `## recall` - a couple of reminders surfaced when relevant.
- `## CONTINUED` - yesterday's open threads, seeded automatically, terse with footnotes.

Footnotes (greppable history)

`^[^c-N]` answers, `^[^cf-N]` carried-forward, `^[^remind-N]` reminders. All end `-- YYYY-MM-DD . grep -rn '^[^c-' .` = every answer you ever got.

Inbox

One line in `_inbox.md`, routed next pass: default -> today, -> Folder, -> append `[[Note]]`, -> claude, -> defer.

When in doubt

Just write. Tag if you feel like it. The system catches up.
